AGILE OPS

OPTIMIZING OPERATIONS MANAGEMENT DRIVES IMPROVED PERFORMANCE. Monitoring alarms and safety systems, accessing actionable data and supporting operators with effective tools requires the right operations management software. AgileOps offers customizable solutions for a management system that will support and enhance your operations.

Maintain Safety and Compliance.
Enhance Operator Performance.

Manage Alarm Performance & Monitor Your Entire Control System

Monitoring the health and performance of your alarms is critical to avoiding incidents, maintaining a safe environment and preventing significant financial losses. Effective alarm management requires a timely response, which can be difficult for operators during alarm floods. If the alarm rate is greater than the operator can effectively manage, critical events will be missed and abnormal operations will accelerate. Implementing an alarm management solution, like AgileOps, can ensure safe operations, help you maintain compliance, and enhance operator performance.

In addition to alarm management, AgileOps also monitors the state of your entire control system. AgileOps preserves the safety of your operations by tracking when your safety system deviates from normal conditions and aids in maintaining compliance with regulatory requirements via a central data repository. As a consistent reporting resource across all your control systems, AgileOps minimizes operator overload and provides tools to support your operations.

Maintain Operational Efficiency With AgileOps Software Modules

The AgileOps suite is comprised of several modules that can be implemented based on your specific needs, enabling you to customize the way you manage your operations.

- **AgileOps Performance Analytics** – Monitor alarm and event metrics and track key performance indicators across the unit, site or enterprise with powerful dashboard capabilities and reports.
- **AgileOps Database** – View, configure and manage all collected control system data, process boundaries and alarm rationalization data.
- **AgileOps Dynamics** – Operators can change alarm configuration based on the operating state and process conditions, eliminating alarm floods and reducing the risk of missed alarms.
- **AgileOps Alarm Shelving** – Reduce stale and nuisance alarms, automatically re-enable alarms, and minimize the number of alarms on the operator's interface.
- **AgileOps Safety Integrity** – Monitor bypasses and interlocks to determine if your safety system is operating normally or if a safety function is active. Also includes safety integrity level monitoring.
- **AgileOps Operational Limits** – Monitor key operational parameters to determine violations from normal condition and time in violation.

Operations Management for All Control Systems

AgileOps is compatible with many control system platforms, including Emerson DeltaV and Ovation, Honeywell Experion and TDC, Schneider Foxboro, Rockwell Allen-Bradley, Siemens PCS 7 and APACS, ABB 800xA and Advant, Dow MOD 5, TIS/OMM, ClearSCADA, and Yokogawa CENTUM VP—delivering a complete solution for an entire site regardless of the control system. For additional control systems, a connector will enable operation. AgileOps also features a fast and easy no/low code configuration.

Key Features

- **Vendor Agnostic** – AgileOps can be used with any control system brand, providing you with a single solution for monitoring your control systems.
- **Built on Industry Standards** – AgileOps is compliant with ISA 18.2 and IEC 62682 standards.
- **Local Support and Engineering** – ECI has offices in PA, OH and WV and is ready to support you with everything operations management.
- **Software Customizability** – Select specific software modules for a customized solution designed for your facility.
- **Customizable User Capability** – You can view AgileOps data as a reporter or change settings as an analyst.

**Are you ready to start or
advance your operations
management journey?**

**ECI can help you implement AgileOps and gain
more control in your operating environment.**
