PIPELINE SERVICES

HIGH QUALITY PIPELINE MAINTENANCE AND REPAIR IS CRITICAL TO CONTINUED, EFFICIENT OPERATIONS. You need to align with a local services partner that can quickly deploy technicians trained to maintain your valves, actuators and instrumentation, and can support your inventory needs. ECI offers the expertise and resources to deliver comprehensive pipeline services capabilities developed to help reduce risk and support operational success.

Reduce Downtime
and Protect Pipeline
Operations

When you partner with ECI, you have access to comprehensive pipeline service capabilities and the expertise of highly trained, local technicians.

Electric, Hydraulic and Pneumatic Actuator Repair

Skilled actuator maintenance and repair can significantly influence pipeline productivity and uptime. ECI's local technicians are experienced in actuator repair and factory-trained in **Bettis, Fisher, Shafer, and Biffi** actuator repair. Factory training is essential to the protection of critical pipeline operations. Scheduled maintenance and strategic inventory management and stocking programs deliver safety and reliability and help drive operational certainty.

Pressure Relief Valve Service

ECI's pressure relief valve testing and repair capabilities cover a range of services to meet on- and off-site requirements. ECI is National Board certified in PRV repair and our local technicians are factory trained. Steam, liquid, air and gas testing is completed in the ECI Operations Center. Field capabilities include air, gas and liquid testing with our mobile trailer. We also perform in-line steam testing and valve repair.

Flow and Instrumentation Calibration Services

As the local Emerson Premier Service Provider for **Rosemount, Micro Motion** and **Flexim** products, ECI provides highly specialized instrumentation services. Factory-level support for startup, commissioning, repair-by-replacement and outages, and NIST traceable calibration services, support safety and regulatory requirements. Our technicians are trained on instrumentation calibration and repair and can work seamlessly with your team.

Control Valve Repair

Control valve repair services are managed by highly skilled technicians with extensive valve expertise. In addition to complete repair capabilities that encompass all valves, we also have access to **Fisher-Certified technicians** and **Fisher** product documentation. This expertise delivers effective planned and emergency services and helps you reduce downtime. From commissioning and calibration to OEM replacement parts and inventory management, ECI's valve repair program is designed to optimize your operations.

A Partner You Can Trust

ECI has the experience to support pipeline operations. As your services partner, our **Shafer** actuation repair, PRV and control valve repair and instrumentation calibration services are supported by local inventory, factory-trained technicians and outage management expertise.

Inventory Availability

ECI offers local inventory and has access to the inventory of the Emerson Impact Partner network across North America. Additionally, we can develop flexible inventory programs for customers based on specific needs including reserve inventory and outage planning.

Local Presence

A responsive, local service provider that can deploy resources when and where needed can be a true partner in your success. With technicians and service center across this region, ECI can respond quickly to both planned and emergency repair and maintenance requests.

Factory-Trained Technicians

Critical operations demand high quality, specialized repair and maintenance services. ECI's factory-trained technicians, who are experienced in pipeline operations, can be trusted to maintain and repair your assets while operating as an extension of your team.

Streamlined Solutions

ECI delivers the range of repair and maintenance services you need. A single source for all valve, actuator and instrumentation services streamlines your maintenance operations and ensures a cohesive, documented and well-planned approach.

Outage Management

Minimizing risk during outages is essential. ECI's proven, six-step outage management process delivers an efficient approach focused on your goals. Advanced planning ensures inventory availability and access to technicians that can return your assets to peak operating condition.

STO Inventory

De-risk outage planning with our STO Inventory program. Preferred pricing and stocked inventory support your planned asset needs. This pre-purchased STO inventory includes a full return to the factory for any unused equipment – ensuring availability with no obligation.
